

The work is divided into two main chapters. The field of hipporehabilitation is defined in the theoretical part. There are explained the terms of pedagogical-psychological riding, hippotherapy and disabled sport. Furthermore, there are discussed conditions which must be satisfied that the hipporehabilitation could carry out in practice. The fundamental part of the work lies in the practical part. There is presented hipporehabilitative Czech company which is in a dominant position and sees to the maintenance and implementation of the method. The following is a summary of hipporehabilitative facilities in the Czech Republic. Attention is paid to 3 organizations where I underwent my scholarship - mental home Bohnice, Activity and Gym unity Orion. I describe services they offer. The greatest attention is paid to the methodology for the most common diagnosis - mental disability, Rett syndrome, autism, hearing disability, cerebrospinal multiple sclerosis, motion apparatus and addiction. The target group and methodology are defined in each chapter. As the empirical method I chose casuistries in which I describe the course and rationale of the therapy.
